HIGHLIGHTS

- Data Analyst, BI Developer & AI Engineer with 4+ years of enterprise experience at Nokia and Acies Global, turning complex, fragmented data into clear insights that help business leadership act with confidence, delivering Power BI dashboards, SQL-driven data pipelines, and Python automation across enterprise environments.
- Strong CS fundamentals with a solid analytical foundation across SQL (5+ years), Python (pandas, scikit-learn, statsmodels), Power BI (DAX, Power Query, semantic modelling), Tableau, and modern data platforms including Databricks Lakehouse and Microsoft Fabric.
- Hands-on expertise in ML model evaluation, responsible AI practices, and applied experience in predictive customer analytics and anomaly detection, actively building GenAI and LLM capabilities through AWS Bedrock, LangChain, and RAG with ChromaDB, bringing AI engineering into real business reporting workflows.
- Eligible for Government of Canada Reliability Clearance · Open to relocation across Canada
- Currently learning French

TECHNICAL SKILLS

BI & Visualization: Power BI, Tableau, Streamlit

GenAI: Databricks Generative AI Fundamentals (certified), LLM/Prompt Engineering, AI-assisted Analytics, AWS Amazon Bedrock, LangChain for LLM Applications (DeepLearning.AI), RAG with ChromaDB (DeepLearning.AI).

Programming: Python, SQL, C, Advanced Excel

Data Platforms: Databricks Lakehouse, Microsoft Fabric, Azure Data Factory, Alteryx, ETL/ELT Pipelines, Star Schema, Dimensional Modelling

Business Analysis: Requirements Elicitation, User Stories, Process Maps, SOPs, Data Dictionary, UAT Support, Stakeholder Engagement, Jira, Confluence

Collaboration: Git/GitHub, Agile/Scrum, Waterfall, MS Teams, SharePoint, PowerPoint, Word, Technical Documentation.

AI -Assisted Productivity: Cursor, Claude Code, Microsoft Copilot

WORK EXPERIENCE

Project Operations Coordinator | PES Associates - Ottawa, ON

May 2025 - Present

- Supported civil engineering project teams with performance tracking, maintained PO/CO logs, WIP sheets, and project binders across 5+ concurrent projects, ensuring accurate and consistent data capture.
- Developed Power BI dashboards tracking project KPIs, WIP status, and budget vs actual, delivering real-time performance visibility to project managers across active construction projects.

Data & Reporting Analyst - Co-op | Nokia - Ottawa, ON

Sep 2024 - Jan 2025

- Consolidated fragmented procurement data from 3 legacy systems following Nokia's Infinera acquisition, mapped source-to-target data flows, resolved inconsistencies, and built a unified Power BI reporting layer that gave 15+ stakeholders a single trusted view of combined operations.
- Designed and built Power BI semantic models and KPI dashboards, developed advanced DAX measures, Power Query transformations, and star schema data models that reduced dashboard load times by 40% and improved reporting accuracy by 40%.
- Automated recurring data workflows using Python (pandas, pyodbc), eliminated 5-8 hours of weekly manual processing, improved pipeline reliability by 60%, and reduced recurring incidents significantly.
- Maintained data governance standards, created a comprehensive data dictionary, enforced consistent metric definitions, and documented all transformation logic, ensuring full auditability and stakeholder trust.

Associate Digital Scientist | Acies Global - India

Oct 2020 - Nov 2023

- Delivered end-to-end analytics solutions for 3+ enterprise clients across supply chain and manufacturing, built Power BI and Tableau dashboards, designed ETL pipelines, and performed statistical analysis that improved client operational decision-making efficiency by 25%.
- Applied Python and ML models to enterprise datasets, developed predictive models, anomaly detection systems, and automation scripts that reduced manual effort by 35% and delivered forward-looking insights to client leadership.

- Maintained data quality and governance across all client environments, implemented validation frameworks, documented business rules and metadata, and enforced consistent standards, reducing data inconsistencies by 30%.
- Facilitated training sessions and created user documentation, delivered 20+ knowledge-sharing sessions and built SOPs that improved tool adoption and data literacy across client organizations.

PROJECTS

Applied ML/AI and BI projects demonstrate full-cycle ownership from data engineering to business-facing insight delivery.

Procurement Spend Analytics Dashboard *(Python, Streamlit, pandas, Plotly, scikit-learn)*

May 2026

- Designed and built an interactive procurement spend analytics dashboard, developed KPI scorecards tracking budget vs actual, supplier performance rankings, and spend category breakdowns; identified \$270K in maverick spend and 727 late deliveries through automated anomaly detection, enabling proactive procurement decisions.
- Built ML-based 3-month spend forecasting with confidence intervals and deployed as a live Streamlit application, demonstrating full-cycle ownership from data engineering through model inference to user-facing dashboard.

Engineering Firm Public Stats Dashboard *(Power BI, Streamlit, Python, Google Sheets API)*

May 2025

- Designed and built a public-facing analytics dashboard for a licensed civil engineering firm, displaying live project stats including 20+ completed projects, geographic distribution across Ontario cities, project category breakdowns (residential and commercial), and permit approval rates, directly embedded into the company website.
- Connected live Google Sheets data via API to Streamlit, ensuring dashboard metrics updated automatically as new projects were added, eliminating manual reporting effort and providing real-time credibility stats for prospective clients.

Canadian Infrastructure Analytics *(Python, LSTM, Regression, Streamlit)*

Aug 2024

- Built an end-to-end analytics solution for IRCC government infrastructure data, designed automated ETL pipelines, developed predictive models (regression + LSTM - 88.65% accuracy), and deployed interactive dashboards with KPI tracking and trend analysis for policy decision-makers.
- Applied feature engineering and data preprocessing across multi-source government datasets, cleaned, transformed, and validated 10,000+ records, ensuring data integrity and model reliability throughout the full analytical pipeline.

US Election Sentiment Analysis *(Power BI, Tableau, Python, NLP)*

Apr 2024

- Developed parallel BI solutions in Tableau and Power BI, NLP sentiment scoring, semantic data models, DAX measures, and geographic/time-series dashboards delivering public opinion insights across key states.

EDUCATION

Post-Graduate Diploma - Cybersecurity Analysis

2025

Algonquin College, Ottawa, ON | GPA: 3.52 / 4.0 (88%)

Post-Graduate Diploma - Business Intelligence & System Infrastructure

2024

Algonquin College, Ottawa, ON | GPA: 3.61 / 4.0 (90.25%)

Bachelor of Engineering - Computer Science

2022

RMK College of Engineering & Technology, India | GPA: 8.5 / 10 (85%)

CERTIFICATIONS & TRAINING

- Databricks Accredited Generative AI Fundamentals - Databricks
- Databricks Accredited Lakehouse Fundamentals - Databricks
- Microsoft Power BI: Build Visuals and Reports - LinkedIn Learning
- Enterprise Design Thinking Practitioner - IBM
- Project Schedule: Monitor & Control Specialist (Accredited)

ACHIEVEMENTS & AWARDS

Spotlight Award | Acies Global, India

2023

Recognized by Founder & CEO Mukund Raghunath for exemplary analytical performance, data quality improvements, and mentoring colleagues in analytics best practice.

Dean's Honour List | Algonquin College

2024

Awarded Dean's Honour List recognition for the Post-Graduate Diploma in Business Intelligence & System Infrastructure, achieving a GPA of 3.61 / 4.0 (90.25%), placing in the top tier of the graduating cohort.
